WEATHER OF CONCERN

Weather of Concern

Northern California:

- Travel highly discouraged until Saturday. If you must go, prepare for chain controls, lengthy delays, possible road closures, & treacherous driving conditions.
- Winter Storm Warnings are in effect for the Sierras through 03/17/18 at 0500 hours.

Southern California:

- The next storm system will reach southwest California on Friday with steady rain to overspread scattered showers lingering on Saturday.
- Snow levels will range from 4,500-5,000 feet with accumulating snow likely in the mountains.
- Winter driving conditions (chains) expected in the mountains.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

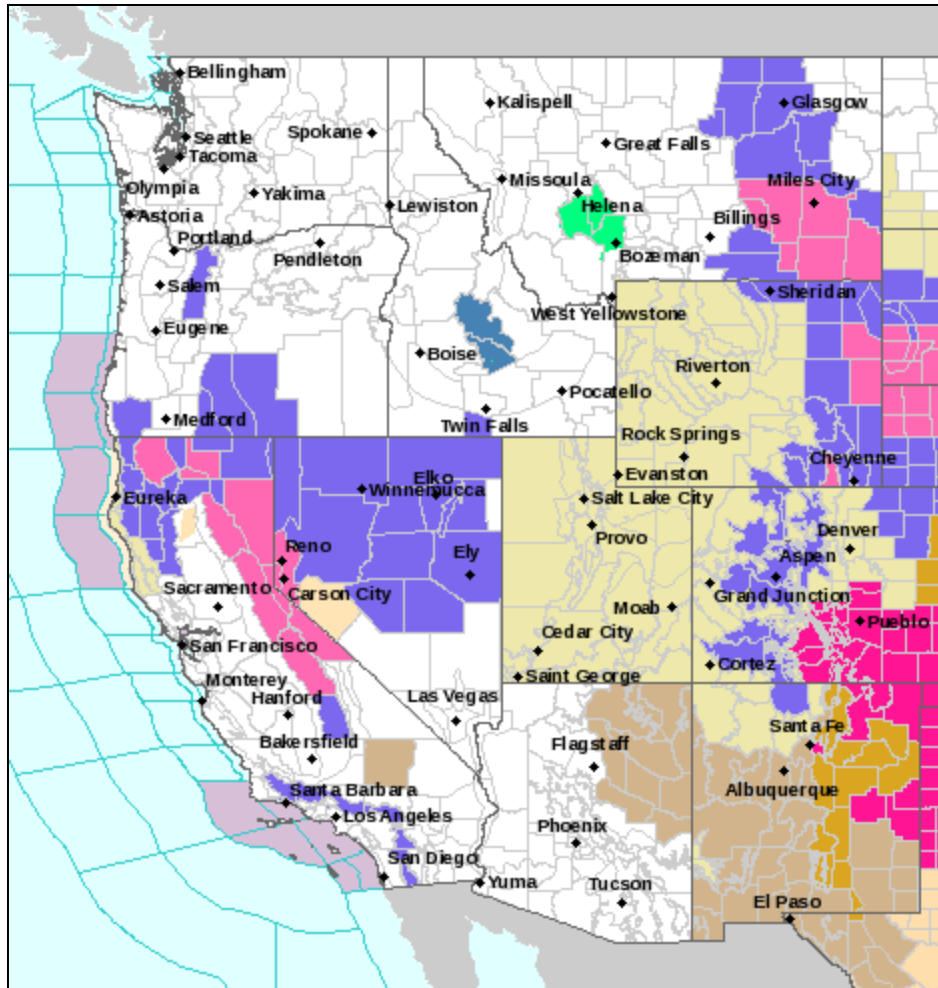

The second lobe of a parent Pacific low will swing over the region today and Friday with some residual showery impacts on Saturday. Expect another 1 to 3 inches of liquid water through Saturday with snow levels dropping to around 2,500 feet. Southerly winds will increase today and last into the evening with peak gusts between 30 to 40 mph favoring the highest ridges across the north and east. A lighter wind flow expected Friday and Saturday. Ridging will affect the area Sunday and Monday. This means drier and slightly warmer conditions. Wind speeds will remain on the lighter side. Southerly winds should increase Tuesday/Wednesday due to a strengthening offshore low. This flow is expected to be moist and allow precipitation to develop over the region. As mentioned yesterday, models have had a hard time projecting the track of this low. The latest models have come in a little stronger in terms of precipitation chances and suspect that trend will continue as we near the event period. Either way, temperatures would eventually cool as the system draws closer and humidity values would be on the high side much of next week.

SOUTHERN CALIFORNIA

A storm currently off the Pacific Northwest Coast will continue to bring scattered showers to the region at times through Saturday evening. Most locations will receive less than a half inch of additional rainfall, but the Central Sierra and its surrounding foothills will receive an additional 1 to 2 inches of rainfall. The snow level will be between 5,000 and 6,000 feet through Friday and then drop to between 4,000 and 5,000 feet Saturday. South to west winds of 20 to 30 mph with gusts to 50 mph will continue to surface across the mountain ridges and desert passes through Saturday evening. Temperatures will be around 10 degrees below normal through Saturday, with mid 30s to mid 40s across the mountains and 50s to low 60s in the valleys. Temperatures will warm and winds will become light Sunday and Monday as a weak ridge of high pressure builds into California from the south. Temperatures will be near normal Monday. Another potential storm will bring possible rainfall along with strong south to west winds once again toward the middle of next week.
